COMFLUENT
where the networks meet

The Rocky Mountain Internet eXchange

The RMIX is committed to providing a high quality, secure and neutral peering point for the Rocky Mountain Region. In addition to the traditional efficiency benefits of IP peering, our location offers obvious opportunities for VoIP, as our members can easily connect with other voice providers.

Who's on the RMIX?

- **Front Range Internet**
- **Mammoth Networks**
- **Viawest**
- **Data 102**
- **myDurango.net**
- **Comfluent**
- **foreThought.net (pending)**
- **The Front Range Giga Pop (pending)**
- *And others ...*

Why peer at the RMIX?

It's Reliable: The RMIX can help you guarantee QoS and minimize latency because its wire-speed switching acts like a private line. With one connection to the RMIX, you have the same benefit as you would have with point-to-point connections to its individual members. No other company in Denver can offer this service.

It's Faster: Many of the data packets traveling between Colorado ISPs get sent to the major exchange points located on the east and west coasts, and then back again. The laws of physics impose nearly a 30ms penalty on these packets. Data packets sent across the RMIX make far fewer hops than they would on the Internet at large, and stay within Colorado.

It's Cheaper: For most ISPs it is far less expensive to exchange data packets over the RMIX than to pay for IP transit. If you are in the Comfluent facility, we're just an Ethernet cable away, bypassing the local loop.

It's growing every day...
