COMFLUENT
where the networks meet

A fast, secure private network for less.

Do you have locations that only Qwest can reach?

Do you want to connect two offices, but not pay for a T1?

Do you want a T1 between cities, but not the mileage charges?

Do you want to replace a Frame Relay network?

Do you want it Ethernet?

Are you looking for a way to create a cost effective private network at the T1 level that's truly private? One that's truly plug and play? Something you can set up and then *not* have to think about every day?

Comfluent offers you a very simple solution with our Transparent Ethernet Service. It's like running a long Ethernet cable between your locations. The connection comes out as an Ethernet port at all points, making it truly plug and play. It's far less expensive than traditional frame relay, but it runs at the same or faster speeds. We can even connect it with other, faster services.

And it's management-free on your part. Best of all – it's really secure. Your data stays on your private network – meaning it stays in your hands at all times. Set it up and then get back to your core business.

It's available anywhere Qwest DSL is because we use the same technology. But it's not just any old DSL. Our proprietary system makes it a private network service for a fraction of the cost.
